

Provide personalized, pet-friendly compounded medicine **without** **compromise**

Covetrus® Compounding Pharmacies adhere to the highest quality standards and are committed to patient safety and product consistency for compounded medications in veterinary medicine.

- ✓ **503A** — Our 503A pharmacy is Pharmacy Compounding Accreditation Board approved and committed to meeting the national quality standards set by the PCAB. We are compliant with USP 795, 797, and 800 offering one of the largest formularies of veterinary compounded medications available in the US.
- ✓ **503B** — Our 503B pharmacy manufactures compounds under strict, FDA-regulated cGMP standards—a quality standard also used in human drug manufacturing. These facilities are continually monitored by the FDA, DEA, and state boards of pharmacy to ensure compliance, which supports the highest degree of quality assurance for both the veterinarian and patient.
- ✓ **cGMP** — The cGMP regulations we adhere to contain requirements for the methods, facilities, and controls used in manufacturing, processing, and packing of a drug product. The regulations make sure that a product is produced under quality controlled conditions, and that it has the ingredients and strength it claims to have. Compounded medications must be produced under the direct supervision of a licensed pharmacist within the facility, and be inspected by the FDA in order to comply with cGMP requirements.

For questions regarding our veterinary-exclusive compounding pharmacies, quality standards, or products you can speak to one of our veterinary-trained pharmacists at 877-518-4589.
