## Vial Light + Moisture Testing

Centor by email at prescription@centorrx.com or by phone at 1-800-321-3391.

\*\*United States Pharmacopeia Chapter 671(USP 671) is designed to provide standards for the functional properties of plastic containers and their components used to package regulated articles. A container is intended to provide its contents protection in two areas: 1. Light Resistance -- no more than 10% transmission, and 2. Moisture Vapor Transmission Rate (MVTR). To qualify as tight, no more than one of ten containers can exceed moisture transmission of 100mg per liter per day and none can exceed more than 200mg per liter per day.
